RE: Site Management Activity Completed, NYNEX, Dummerston, Vermont
(site #90-0544)

Dear Mr. Landin:

The Vermont Department of Environmental Conservation, Sites Management Section (SMS) has received and reviewed the July 5, 1995 GZA Remediation, Inc. report concerning the summary and evaluation of historical analytical and water level data at the NYNEX Maintenance Garage in Dummerston, Vermont. Based on the conditions at this site, the SMS has determined that this site has been successfully remediated and that the site is now eligible for a SMAC (Site Management Activity Completed) designation.

This means that the SMS has determined the following:

- the release of gasoline from an underground storage tank on the property has been successfully remediated by the remedial system which operated at this site from April of 1991 to October of 1993.
- groundwater contamination at this site has been successfully mitigated to levels below groundwater enforcement standards.
- the risk to the Charette Water System has been successfully eliminated.

Based on these findings, the SMS has determined that site management activities have been completed. The completion of these activities do not release NYNEX of any past or future liability which may arise from the petroleum contamination which was discovered to have originated from the underground storage tank at the NYNEX Dummerston maintenance garage facility. It does mean that the SMS is not requiring any additional work be performed at this site in response to this contamination which was discovered in 1990.

If you have any questions, please feel free to contact Richard Spiese or me at (802)-241-3888.

Sincerely,

Chuck Schwer, Acting Chief
Sites Management Section
